

Technical Data Sheet

ALLTEMP RINSE

High Performance Rinse Additive for High or Low Temp Machines

A high performance rinse additive designed for use in low or high temperature commercial dishwashing machines. Helps reduce water spotting and produces fast drying of machine washed items. Eliminates the need for towel drying (a health code violation in most areas) which is time consuming, costly and contributes to dish breakage. Contains special foam control additives.

Directions for Use

This product is designed to be dispensed with equipment installed and/or approved by your Service Representative. Inject this product into the final rinse water of the dishmachine at a concentration of 50 to 100 ppm, depending on operating conditions. The amount required and the rinsing and drying performance will be affected by water hardness, rinse water temperatures and the dish machine's mechanical action. Your Service Representative will review these factors and make adjustments as needed to produce good results.

Safety Reminder

Consult product label and Safety Data Sheet (SDS) before use. SDS's can be downloaded from www.crown-chem.com.
